

Auditcon

Auditcon[®] Lock Series

MAS-HAMILTON

MEMBER OF THE UNICAN GROUP

Defining the future of locking technology.

50 Series

The 50 Series is a stand-alone single combination access control lock with a dual mode function that provides a small business or individual with the convenience of electronic locking.

Auditcon 100

The Auditcon 100 offers the advantages of basic electronic locking, including a programmable key pad, resettable combinations and time delay, making the 100 an economical solution for multi-user access control with audit capability. It's ideal for small businesses and commercial applications.

Auditcon 200/400

The Auditcon 200/400 Series is U.L. Type IR rated. It easily replaces traditional mechanical Group I and Group II locks, upgrading the security of any safe or archive storage unit. Auditcon is perfect for security applications where shared access and audit capability is necessary.

Auditcon 2100D

The Auditcon 2100D is designed with basic operational programs and a variety of programming options. It can be used as a stand-alone safe lock, or when used with its proprietary PC software, as a sophisticated, electronic security system. Plus, it's retro-fittable, replacing obsolete, mechanical dial locks to restore the integrity of your safe.

Features & Benefits

PowerStar™ technology

Self-powered. No batteries, no wiring, no power outage problems and no maintenance.

Access Control

Auditcon models with Smart Key™ capability offer dual-level security that requires a four digit PIN and personal encoded key to gain access. Each user's combination is unique with optional supervisor/subordinate access and time window access by the individual user.

Smart Keys

Increases security and can retrieve audit records from locks, allowing convenient data download and transport for PC reviewing.

Audit Trail

The user's ID is recorded every time the lock is opened, deterring internal theft and providing absolute accountability.

Wrong Try Lockout

Hackers are temporarily locked out after entering wrong combinations.

Touch Key Number Pad

Change, add or delete PIN combinations with the touch of a button - no more calls for costly combination changes.

Economical Replacement

It's retro-fittable, with the same footprint as most conventional mechanical combination locks.

Time Delay

Delay entry from five to 99 minutes; deters would-be intruders, not willing to risk the wait.

Time Display

The easy-to-read LCD prominently displays the time, informing the user when access will be granted.

Dual Mode

Absolute accountability requires the combinations and/or Smart Keys of two users to gain access.

Silent Duress Alarm

Safely lets employees comply with intruder's demands while alerting authorities.

Quick and Easy Entry

Save time - mechanical locks can take as much as 40 seconds or longer to open. Auditcon locks can be opened in just seconds with the correct combination.

Windows® Software

Allows you to save or print audit trail information from your PC. Some models can be fully programmed using the software package.

Choice of Bolt Designs

The "Snap Bolt" and "Slide Bolt" automatically lock the bolt when the safe handle is closed. The "Spring Bolt" is for cabinet locks with no separate bolt work. Auditcon's flexibility makes it right for a variety of security applications.

Technical Support

The Mas-Hamilton Technical Support Staff is available 24 hours a day, seven days a week to answer any technical questions you may have. We take pride in providing regular training classes for our customers.

Businesses that have multiple employee access, multiple locations, absentee ownership or high employee turn-over, are ideal for Auditcon.

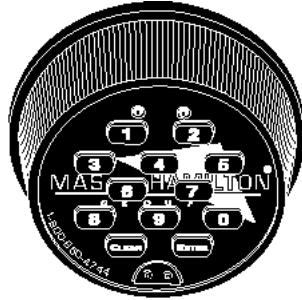

Auditcon can secure safes, containers, vaults and doors to restricted areas for:

- Restaurants
- Ticket box offices
- Convenience stores
- Grocery stores
- Department stores
- Drug stores
- Jewelry stores
- Banks & credit unions
- Hospitals
- Amusement parks & arcades
- Police stations
- Professional buildings
- Data processing centers
- Casinos
